

Accessory Bulletin # 78

October, 2009

648-80 Avenger Windshield

Vehicles Affected: All Avenger & HDi Vehicles

Description:

648-80 Avenger Windshield Kit changes to 848-171. This kit covers both HDi and Avenger models.

Reason for Change:

Windshield support tube changes from 6" in height to 7.250". This change accommodates any vehicle (HDi specifically), with a raised hood scoop and windshield wiper kit combination.

Windshield Installation Note:

For aesthetic reasons, if the vehicle does not have a hood scoop and wiper kit combination, you may choose to cut down the height of the support arm to 6" with a small tube cutter. If for any reason a hood scoop and wiper blade is installed at a later date, you may order the longer (Part # 002904-11C) Tube.

CAUTION

Remember, DO NOT transport the Argo at highway speeds with the windshield upright. For transportation at highway speeds, it is recommended that the vehicle be reversed on the truck or trailer so that the front of the Argo faces to the rear. The windshield should be folded down and secured in place using a rope or a tie down strap.
